

Maintaining Kitchen Work Tops -sealed with Lithofin SV2K-

Dear Customer,

you have decided on an exclusive kitchen work top made of natural stone. We have already sealed the surface with Lithofin SV2K, a special sealer to provide optimal protection for your stone. This protective treatment poses no health concerns and is very hard wearing. It is designed to keep water and oil on the surface and to prevent stains from forming

With the following maintenance system you will keep your stone looking its best for many years:

Maintaining (every-day cleaning)

During or after cooking simply use Lithofin MN Easy-Clean for quick and easy cleaning.

This special cleaner removes oily and greasy dirt and dirt deposits and leaves the surface clean and free of any streaks.

Tip: grease and oil should not remain on the surface for a prolonged period of time. They may turn into resin, which is then very difficult to remove. It is therefore advisable to clean the whole work top and back splash immediately after cooking. Take up spills of acidic or strongly colouring substances (beetroot, grapes, berries, etc.) immediately.

Important, please note:

- **Avoid mechanical wear of the surface**
- **Always use a cutting board, do not cut directly on the stone surface**
- **Do not pull heavy or hot pots and pans across the surface**
- **scouring powder, abrasive pads and sponges and scratchers may damage the sealer and leave mat spots**

All recommended products can be used on kitchen work tops without any health concerns. This is confirmed in independent reports by LGA Nuremberg.

This information should be considered to be informal and non-binding. The products must be used according to local conditions and materials. Instructions must be read carefully and followed closely. Where no previous experiences is available, or in cases of doubt, test the product in an inconspicuous area. (GB6.12gps/6.12)

In case of...

1. Stains caused by felt pens, paints, nail polish, etc.

Carefully clean the surface with Lithofin MN Power-Clean. In very stubborn cases use Lithofin WAX-OFF.

2. Limescale and water spots

Hard water may lead to mat and dull spots. Remove those with a few drops of Lithofin KF Ceramic-Clean.

3. Mat and slightly worn surfaces

Areas that have become dull with wear can be touched up with Lithofin MN Polish Cream.

4. Heavily worn surfaces

The protective effect of the sealer will diminish with time. In those cases the sealer should be reapplied by a qualified applicator.

5. Scratches and cuts in the sealer

When water penetrates through the sealer and into the stone, the protective film is damaged. It should be reapplied by a qualified applicator.

If you require advice or are in any way unsure about these instructions, please call our **Technical Support Line at 019 62 732 126.**
